Challenge Description

the attacker intercept information between receiver and sender. what is the attack name ?

Author: The Analyst: Hyposelenia

Challenge: Intercept

Category: General information

Date: 04/10/26

I. Objective

To identify the type of cyberattack in which an attacker intercepts communication between a sender and a receiver.

II. Background

In network communications, data is transmitted between two parties over various channels. Attackers may exploit vulnerabilities in these channels to secretly observe, alter, or manipulate the exchanged information without the knowledge of either party.

III. Tool Used

- **Search Browser -** Used to verify the attack type based on the given description

IV. Methodology

1. I searched the phrase: *"The attacker intercepts information between sender and receiver. What is the attack name?"*
2. The search results pointed to a well-known attack involving interception of communication.
3. I identified the correct answer as **MITM (Man-in-the-Middle)**.
4. Submitted the answer.

V. Result

Mitm

Answer

mitm

Submit

VI. Explanation

A Man-in-the-Middle (MITM) attack occurs when an attacker secretly positions themselves between two communicating parties. The attacker can intercept, monitor, and even modify the data being exchanged. This type of attack is commonly used to steal sensitive information such as login credentials, session tokens, or financial data, especially on unsecured networks.

VII. Conclusion

The challenge tests knowledge of fundamental cybersecurity attack types. By analyzing the description and verifying it through research, the correct answer was determined. Understanding MITM attacks is essential, as they represent a common and serious threat in network security.
