Challenge Description

The art of hiding messages or information inside other image / text or data

Answer

Answer

Author: The Analyst: Hyposelenia

Challenge: Greeks

Category: General information

Date: 04/10/26

I. Objective

To identify the correct term that describes the practice of hiding information within other data or media.

II. Background

In cybersecurity, various techniques are used to conceal or protect information. One such method involves embedding hidden messages within ordinary files such as images, text, or audio, making the existence of the message difficult to detect.

III. Tool Used

- **Search Browser -** Used to look up the definition and confirm the correct terminology

IV. Methodology

1. Upon reading the question, I recognized that it was referring to a concept involving hidden information.
2. To verify, I searched the phrase: *"the art of hiding information or messages inside other text or data."*
3. The search results consistently pointed to the term **Steganography**.
4. Based on this confirmation, I selected the answer.

V. Result

Steganography

Answer

Steganography

Submit

VI. Explanation

Steganography is the practice of concealing information within another medium such as images, audio files, or text. Unlike encryption, which hides the content of a message, steganography hides the existence of the message itself. This technique has been used historically and continues to be relevant in modern cybersecurity, especially in data exfiltration and covert communication.

VII. Conclusion

The challenge tests basic knowledge of information security concepts. By understanding the definition of steganography and verifying it through research, the correct answer was identified. This highlights the importance of familiarity with fundamental cybersecurity terminology in solving CTF challenges.
