Challenge Description

I am an Organization that releases the Top 10 Vulnerabilities in Application Security . I am .....?

Author: The Analyst: Hyposelenia

Challenge: Contribute

Category: General information

Date: 04/02/26

I. Objective

To identify the organization responsible for publishing the top application security vulnerabilities.

II. Background

In application security, developers and security professionals rely on standardized lists of common vulnerabilities to improve software safety. One of the most recognized organizations in this field is OWASP.

OWASP is a global non-profit organization focused on improving software security. It is widely known for publishing the "OWASP Top 10," a list of the most critical security risks to web applications.

III. Tool Used

- **Search Browser -** Used to search information

IV. Methodology

1. Searched for organizations related to application security vulnerabilities
2. Identified the one known for publishing a "Top 10" list
3. Submitted the answer

V. Result

OWASP

VI. Explanation

The challenge refers to an organization that releases the "Top 10 Vulnerabilities in Application Security." This directly points to OWASP.

OWASP publishes the **OWASP Top 10**, which highlights the most critical security risks in web applications, such as injection flaws, broken authentication, and security misconfigurations. This list is widely used by

developers, security testers, and organizations as a standard guideline for securing applications.

Because of its global recognition and influence in application security, OWASP is the correct answer.

VII. Conclusion

By identifying the organization behind the OWASP Top 10, the correct answer—OWASP—was determined through research and understanding of application security standards.
