**Rating**

★★★★½

**Challenge Description**

I will lock your machine screen or files till you pay me. Who am i ?

**Answer**

Ransomware

**Author:** The Analyst: Hyposelenia

**Challenge:** Pay Me

**Category:** General information

**Date:** 04/10/26

I. Objective

To identify the type of malware described as locking a user's system or files until a payment is made.

II. Background

Malware comes in various forms, each designed with different purposes. Some are created to steal data, while others aim to disrupt systems or extort users. One well-known category involves restricting access to a system or its data and demanding payment in exchange for restoration.

III. Tool Used

- **Search Browser -** Used to verify the concept (if needed)

IV. Methodology

1. Upon reading the description: *"I will lock your machine screen or files till you pay me, who am I?"*, I immediately recognized the behavior described.
2. The characteristics matched a known type of malware that extorts victims by denying access to their systems or data.
3. Based on this, I identified the answer as **Ransomware**.
4. Submitted the answer.

V. Result

**Ransomware**

**Answer**

Ransomware

Submit

VI. Explanation

Ransomware is a type of malicious software that blocks access to a computer system or encrypts files, making them inaccessible to the user. The attacker then demands a ransom payment, typically in cryptocurrency, in exchange for restoring access. This type of attack is widely used in cybercrime and can affect individuals, businesses, and even government systems.

VII. Conclusion

The challenge assesses understanding of common malware types. By recognizing the defining behavior of ransomware, the correct answer was easily identified. This reinforces the importance of being familiar with major cybersecurity threats and their characteristics.
